Politics in Pakistan has traditionally been understood in the context of civil-military relationship. In May 2013, for the first time in history, Pakistan saw an elected government complete a full term in office and transfer power through the ballot box to another civilian government. In view of such an important development, this book offers critical perspectives on Pakistan's current democratic transition and its implications for national politics, security and foreign policy. It critically analyses the emerging political trends in the country, including their underlying sources, attributes, constraints, and prospects of sustainability. Drawing on history, diverse theoretical perspectives, and empirical evidence, it explains the dynamics of the democratic process, contested borders and spaces, and regionalism. Contributions are from 13 prominent scholars in the field, who provide a wide-ranging analysis of Pakistan's contemporary national and regional challenges, as well as the opportunities they entail for its viability as a democratic state. Taking the debate on Pakistan beyond the outmoded notions of praetorian politics and security, the book explores the future prospects of civilian supremacy in the country. It will be of interest to students and scholars of South Asian Politics, Political Sociology and Security Studies, as well as policy-makers, diplomats, security experts and military professionals.

In this unique and innovative contribution to environmental security, an international team of scholars explore and estimate the intermediate-term security risks that climate change may pose for the United States, its allies and partners, and for regional and global order through the year 2030. In profiles of forty-two key countries and regions, each contributor considers the problems that climate change will pose for existing institutions and practices. By focusing on the conduct of individual states or groups of nations, the results add new precision to our understanding of the way environmental stress may be translated into political, social, economic, and military challenges in the future. Countries and regions covered in the book include China, Vietnam, The Philippines, Indonesia, India, Pakistan, Bangladesh, Central Asia, the European Union, the Persian Gulf, Egypt, Turkey, the Maghreb, West Africa, Southern Africa, the Northern Andes, and Brazil.

Poverty and governance are both issues high on the agenda of international agencies and governments in the South. With urban areas accounting for a steadily growing share of the world's poor people, an international team of researchers focused their attention on the hitherto little-studied relationship between urban governance and urban poverty. In their timely and in-depth examination of ten cities in Africa, Asia and Latin America, they demonstrate that in many countries the global trends towards decentralization and democratization offer new opportunities for the poor to have an influence on the decisions that affect them.

Read Book Arif Hasan Wilson Center

They also show how that influence depends on the nature of those democratic arrangements and decision-making processes at the local level, as well as on the ability of the poor to organize. The study involved interviews with key actors within and outside city governments, discussions with poverty groups, community organizations and non-governmental organizations (NGOs), as well as analyses of data on poverty, services and finance. This book presents insights, conclusions and practical examples that are of relevance for other cities. It outlines policy implications for national and local governments, NGOs and donor agencies, and highlights ways in which poor people can use their voice to influence the various institutions of city governance.

Pakistan's transformation from supposed model of Muslim enlightenment to a state now threatened by an Islamist takeover has been remarkable. Many account for the change by pointing to Pakistan's controversial partnership with the United States since 9/11; others see it as a consequence of Pakistan's long history of authoritarian rule, which has marginalized liberal opinion and allowed the rise of a religious right. Farzana Shaikh argues the country's decline is rooted primarily in uncertainty about the meaning of Pakistan and the significance of 'being Pakistani'. This has pre-empted a consensus on the role of Islam in the public sphere and encouraged the spread of political Islam. It has also widened the gap between personal piety and public morality, corrupting the country's economic foundations and tearing apart its social fabric. More ominously still, it has given rise to a new

Read Book Arif Hasan Wilson Center

and dangerous symbiosis between the country's powerful armed forces and Muslim extremists. Shaikh demonstrates how the ideology that constrained Indo-Muslim politics in the years leading to Partition in 1947 has left its mark, skillfully deploying insights from history to better understand Pakistan's troubled present.

Hybrid-Renewable Energy Systems in Microgrids: Integration, Developments and Control presents the most up-to-date research and developments on hybrid-renewable energy systems (HRES) in a single, comprehensive resource. With an enriched collection of topics pertaining to the control and management of hybrid renewable systems, this book presents recent innovations that are molding the future of power systems and their developing infrastructure. Topics of note include distinct integration solutions and control techniques being implemented into HRES that are illustrated through the analysis of various global case studies. With a focus on devices and methods to integrate different renewables, this book provides those researching and working in renewable energy solutions and power electronics with a firm understanding of the technologies available, converter and multi-level inverter considerations, and control and operation strategies. Includes significant case studies of control techniques and integration solutions which provide a deeper level of understanding and knowledge Combines existing research into a single informative resource on micro grids with HRES integration and control Includes architectural considerations and various control strategies for the operation of hybrid systems

At head of title: Woodrow Wilson International Center for Scholars, Asia Program.

Inclusive Urban Development in the Global South emphasizes the importance of the neighbourhood in urban development planning, with case studies aimed at transforming current intervention practices towards more inclusive and just means of engagement with individuals and communities. The chapters explore how diversity of gender, class, race and ethnicity, citizenship status, age, ability, and sexuality is taken (or not taken) into account and approached in the planning and implementation of development policy and interventions in poor urban areas. The book employs a practical perspective on the deployment of theoretical critiques of intersectionality and diversity in development practice through case studies examining issues such as water and sanitation planning in Dhaka, indigenous rights to the city in Bolivia, post-colonial planning in Hong Kong, land reform in Zimbabwe, and many more. The book focuses on radical alternatives with the potential to foster urban transformations for planning and development communities working around the world.

As cities become increasingly congested, current transport patterns are unsustainable: heavy in energy use, high in economic and environmental cost, and

Read Book Arif Hasan Wilson Center

exacerbating inequity between those who can access high-speed travel and those who cannot. Good urban planning develops human-scale cities and encourages modes such as bicycles, increased zones exclusive to pedestrians within cities, and changed fiscal policies to incentivize public over private transport. Equally, it requires good engineering design to manage road use. Sustainable Approaches to Urban Transport brings together contributions from leading international experts in urban planning, transport, and governance who suggest changes to make our cities more sustainable in the face of climate change. All professionals working in transport and engineering and planning students will find an overview of a broad field in this interdisciplinary collection of essays.
