Attention in games: An experimental study ... We feared this might led them to play an [attention game] and choose to allocate more contemplation time to a particular game thinking that their opponent would allocate little to that game. The focus of this paper is to study which game subjects thought was more worthy of attention and why ...

Attention in games: An experimental study - ScienceDirect
Attention in games: An experimental study ... We find that players' attention is attracted to particular features of the games they play and how much attention a subject gives to a given game depends on the other game that the person is simultaneously attending to.

Attention in games: An experimental study - ScienceDirect
Attention in Games: An Experimental Study Attention in Games: An Experimental Study Ala Avoyanyand Andrew Schotter z September 2016 Abstract One common assumption in game theory is that players concentrate on one game at a time. However, in everyday life, we play many games and make many decisions at the same time, and thus have to decide how best to divide our limited Attention in Games: An Experimental Study

Attention In Games An Experimental Study
Downloadable (with restrictions)! A common assumption in game theory is that players concentrate on one game at a time. However, in everyday life, we play many games and make many decisions at the same time and have to decide how best to divide our limited attention across these settings. In this paper we ask how players solve this attention-allocation problem.

Attention in games: An experimental study
Abstract. In this paper, I test the predictions of rational inattention theory using a laboratory experiment where one role in a two-player game faces cognitive costs to process information about a payoff-relevant state. I find that subjects who face these unobservable cognitive costs have state-dependent choices and action-dependent response times that are consistent with being rationally inattentive, which provides evidence that subjects can adjust their cognitive processes in line with ...
