Bendix Air Disc Brakes convert air pressure into braking force. (See Figure 2.) When the vehicle brakes are applied, air enters the service brake chamber through the supply port, applying pressure within the diaphragm. The pressure expands the diaphragm, applying force to, and moving the pressure plate and pushrod forward.

Bendix Air Compressors The air compressor is the source of energy for the air brake system. Usually driven by the vehicle engine, the air compressor builds the air pressure for the air brake system. The air compressor is typically cooled by the engine coolant system and lubricated by the engine oil supply.

Bendix rotors are normally service-free. Turning of Bendix spline rotors is not permitted. Conventional rotors may be turned when

# File Type PDF Bendix Air Disc Brakes Manual

changing pads, but is not normally necessary. In the case of severe grooving of the entire friction surface, however, turning could be useful, and may increase the load-bearing surface of the pads.
