code snippets shown over here will work only on a Linux system and not on Windows. The windows api to socket programming is called winsock and we shall go through it in another tutorial.

Socket programming in C on Linux – The Ultimate Guide for ...

Send and receive data. There are a number of ways to do this, but the simplest is to use the read() and write() system calls. The steps involved in establishing a socket on the server side are as follows: Create a socket with the socket() system call Bind the socket to an address using the bind() system call. For a server socket on the Internet, an address consists of a port number on the host machine.
