Mps have voted in favour of controversial proposals allowing the cloning of human embryos for medical research. The regulations were overwhelmingly endorsed in a free vote following a sometimes ...

Yes to cloning human embryos

Scientists believe therapeutic cloning could bring about a medical revolution. We outline the short and long-term scientific implications. Scientists could use cloned human embryos to create any ...

Embryo cloning: the facts

A four-bedroom home in Summit recently sold for \$1.912 million. The home, located off Woodland Avenue, was recently painted and includes a large lower level with a recreation room, according to ...

The terms 'recombinant DNA technology', 'DNA cloning', 'molecular cloning' or 'gene cloning' all refer to the same process: the transfer of a DNA fragment of interest from one organism to a self-replicating genetic element such as a bacterial plasmid. The DNA of interest can then be propagated in a foreign host cell. This technology has been around since the 1970s, and it has become a common practice in molecular biology labs today. Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal. Dolly was created by reproductive cloning technology. In a process called 'somatic cell nuclear transfer' (SCNT), scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus, and thus its genetic material, has been removed. The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division. Once the cloned embryo reaches a suitable stage, it is transferred to the uterus of a female host where it continues to develop until birth. Therapeutic cloning, also called "embryo cloning," is the production of human embryos for use in research. The goal of this process is not to create cloned human beings, but rather to harvest stem cells that can be used to study human development and to treat disease. Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body. This new book presents an up-to-date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic. Access to the abstract and books sections is provided by title, subject and author indexes.

Joanna May, sixty, learns that her estranged husband, Carl, has created four, thirty-year-old clones of her

His review has got to be 'in' by mid-day tomorrow ... at about 9 pm his mind will grow relatively clear, and until the small hours he will sit ... skipping expertly through one book after another and laying each one down with the comment, 'God, what tripe!' ... Then suddenly he will snap into it. All the stale old phrases--'a book that no one should miss', 'something memorable on every page'--jump into their places like iron filings obeying the magnet. Thus did George Orwell, writing forty years ago in *Confessions of a Book Reviewer*, describe the labours of a typical literary hack. Precious little has changed over the intervening decades; the servility of the satirical magazine *Private Eye*. Lord Gnome's *Literary Companion* assembles, in thematic order, the best of these columns to present an astringent, rude and funny survey of publishers and the published.

In this ground breaking work of synthesis, Monika Fludernik combines insights from literary theory and linguistics to provide a challenging new theory of narrative. This book is both an historical survey and

theoretical study, with the author drawing on an enormous range of examples from the earliest oral study to contemporary experimental fiction. She uses these examples to prove that recent literature, far from heralding the final collapse of narrative, represents the epitome of a centuries long developmental process.

Women's Utopian and Dystopian Fiction explores the genres of utopian and dystopian recent fiction. It is about how this literature of both imagined perfection and disaster creates new worlds and critiques gender roles, traditions, and values. Essays range in subject matter from Charlotte Perkins Gilman, P. D. James, Joanna Russ, and Marge Piercy, to Ursula Le Guin, Fay Weldon, and Toni Morrison. Two of the three sections focus on Doris Lessing and Margaret Atwood. Examining especially the twentieth century, including second-wave feminism, writers from Tunisia, Turkey, Italy, Korea, the US, and England give both an historical and a global perspective. Utopian and dystopian elements are explored in the Nobel-Prize-winning Doris Lessing's *Memoirs of a Survivor*, the little-known Mara and Dann, and *The Cleft*; and new perspectives are offered on Atwood's *The Handmaid's Tale*.

This study raises several issues of general relevance to contemporary writing and criticism. The role of the media in presenting both author and oeuvre, the position of the woman writer vis-a-vis feminism, the confrontation of feminism and postmodernism, the question of popular versus high art forms, and the emergence of the author as public oracle are considered in relation to Weldon's considerable literary output.

In recent years, the well-established field of human anthropology has been put under scrutiny by the new data offered by science and technology. Scientific intervention into human life through organ transplants, euthanasia, genetic engineering, experiments connected to the genetic code and the genome, and varied other biotechnologies have placed ethical beliefs into question and created ethical dilemmas. These scientific inventions influence our views on birth and death, on the construction of the body and its technical reproducibility, and have problematized the concept of the human persona. The purpose of bioethics, the science of life, is to find new values and norms which will be valid for a multicultural society. Bioethics is, today, a well-respected topic of research that has brought together philosophers and experts to discuss the limits of science and medicine. The aim of this book is to merge the two fields of bioethics and law (or biolaw) through the literary text, by taking into consideration the transformations of the concept of persona at which we have nowadays arrived. The new meaning of the term 'persona' represents in fact the final point of a long-standing quest for man's sense of his own being

and human dignity, and of his capacity to live in social interrelations. The volume presents a wide range of perspectives, comprising methodological approaches, legal and literary aspects.

"This is a conceptually innovative book which expands the meaning of motherhood to include mothers 'without child'; it is also a compassionate political book which refuses the boundary between 'good enough' and 'bad' mothers. *Mother Without Child* is an engaging, witty, and provocative literary study which should fascinate anyone who is interested in mothering or in looking for new ways to talk about motherhood without erasing some women's experience or dividing mothers from each other."--Sara Ruddick, author of *Maternal Thinking: Toward a Politics of Peace* "Hansen positions her study in a genuinely new space . . . taboo ground, which demands not only a great deal of courage to address, but also enormous intelligence and insight. Hansen is up to this task. . . hers is a pioneer study that will have a significant impact on the ways that non-procreative motherhood is discussed and understood." --Madelon Sprengnether, author of *The Spectral Mother: Freud, Feminism, and Psychoanalysis* "Since the beginnings of the second wave of feminism in the 1960s, feminist scholars have been obsessed with motherhood. *Mother Without Child* takes us to the next stage in this fascinated and fascinating exploration. Through illuminating readings of contemporary stories of thwarted motherhood, Hansen challenges the persistent and constraining definitions of the good and even the good-enough mother. She enjoins us to listen to the moving, devastating, and often inspiring stories of mothers who survive the loss of their children and she urges us to find there not the angry voices of feminist daughters who cannot forgive their patriarchal mothers, but alternative stories of a different maternity that can lead us to alternative plots and visions of women's lives. We need this book."--Marianne Hirsch, author of *The Mother/Daughter Plot: Narrative, Psychoanalysis, Feminism* "A careful, committed, and freshly clarifying voice. Hansen's graceful prose and finely interwoven explorations are much needed at this time. Through readings of contemporary fiction, she enriches our vocabulary for discussing the overdetermined topic of motherhood and deepens our understanding of both its psychological and contemporary political dimensions. *Mother Without Child* is a book for historians and social scientists as well as literary scholars."--Laura Doyle, author of *Bordering on the Body: The Racial Matrix of Modern Fiction and Culture*
