- Go to the same section for that certificate from the S170 configuration file and check if the cert is valid. - If its valid you can copy them (you will need to copy from the cert_name, the cert it self and the key) - Then paste them(in the exact section in the config file) to the existing configuration file that you want to upload

WSA config load - Cisco Community
The first thing that we need to do here to have ISP load balancing with multiple internet connections is to configure dynamic NAT, dynamic network address translation, on Cisco router R1 that connected directly to two ISP. So, clients computers in user LAN and servers in server farm LAN within the internal network can reach to internet.

Dual ISP load balancing on Single Cisco Router | Tech Space KH
Geographical load balancing for VPN often uses a Cisco Global Site Selector (GSS). The GSS uses DNS for the load balancing, and the time to live (TTL) value for DNS resolution is defaulted to 20 seconds. You can significantly decrease the likelihood of connection failures if you increase the TTL value on the GSS.

CLI Book 3: Cisco ASA Series VPN CLI Configuration Guide ...
Your Cisco network configuration is stored in two main locations: One is in RAM, and the other is in the configuration that is in use, or the running configuration. When you type commands, those commands are activated immediately and are stored in the running configuration, which is stored in RAM.
