Digital Systems and Microprocessors - ANU

Digital Systems and Microprocessors (ENGN3213) This course introduces advanced theoretical and technical knowledge of digital circuits and embedded systems. Digital systems and embedded systems are at the heart of almost all modern mechatronics and electronics technologies, ranging from smartphones to autonomous vehicle technologies.

Course topics are complemented with the design of a simple processor, introduced as a transversal example of a complex digital system. This example will let you understand and feel comfortable with some fundamental computer architecture terms as the instruction set, microprograms and microinstructions.

DSP A Digital Signal Processor, or DSP for short, is a chip that is specifically designed for fast arithmetic operations, especially addition and multiplication. These chips are designed with processing speed in mind, and don't typically have the same flexibility as general purpose microprocessors.

Engineering - Digital Systems

Embedded systems with microcontrollers and programmable logic controllers are often used to implement digital logic for complex systems that don't require optimal performance. These systems are usually programmed by software engineers or by electricians, using ladder logic.

Digital electronics - Wikipedia design combinational and sequential circuits; use a digital design and simulation package, use a hardware description language (HDL), analyze binary storage device behavior and applications. Also to study the fundamentals of microprocessor architecture, including assembly language programming, and to understand the design of a basic microprocessor.
