Being literate in an academic discipline means more than simply being able to read and comprehend text; it means you can think, speak, and write as a historian, scientist, mathematician, or artist. Doug Buehl strips away the one-size-fits-all approach to content area literacy and presents a much-needed instructional model for disciplinary literacy, showing how to mentor middle and high school learners to become "academic insiders" who are college and career ready. This thoroughly revised second edition of *Developing Readers in the Academic Disciplines* shows how to help students adjust their thinking to comprehend a range of complex texts that fall outside their reading comfort zones. This book --a natural companion to Buehl's *Classroom Strategies for Interactive Learning*, which has been bolstering student comprehension for almost three decades--provides the following supports for teachers: Instructional tools that adapt generic literacy practices to discipline-specific variations Strategies for frontloading instruction to activate and build background knowledge New approaches for encouraging inquiry around disciplinary texts In-depth exploration of the role of argumentation in informational text Numerous examples from science, mathematics, history and social studies, English/language arts, and related arts to show you what vibrant learning looks like in various classroom settings *Developing Readers in the Academic Disciplines* introduces teachers from all disciplines to new kinds of thinking and, ultimately, teaching that helps students achieve new levels of understanding.

What it really means to "read closely" Call it close reading, call it deep reading, call it analytic reading--call it what you like. The point is, it's a level of understanding that students of any age can achieve with the right kind of instruction. In *Rigorous Reading*, Nancy Frey and Doug Fisher articulate an instructional plan so clearly, and so squarely built on research, that teachers, schools, and districts need look no further: Purpose & Modeling Close & Scaffolded Reading Instruction Collaborative Conversations An Independent Reading Staircase Performance

Adding It Up explores how students in pre-K through 8th grade learn mathematics and recommends how teaching, curricula, and teacher education should change to improve mathematics learning during these critical years. The committee identifies five interdependent components of mathematical proficiency and describes how students develop this proficiency. The committee discusses what is known from research about teaching for mathematics proficiency, focusing on the interactions between teachers and students around educational materials and how teachers develop proficiency in teaching mathematics.

Organized for utility, the book explores how the principles of learning can be applied in science at three levels: elementary, middle, and high school. Leading educators explain in detail how they developed successful curricula and teaching approaches, presenting strategies that serve as models for curriculum development and classroom instruction. Their recounting of personal teaching experiences lends strength and warmth to this volume. This book discusses how to build straightforward science experiments into true understanding of scientific principles. It also features illustrated suggestions for classroom activities.
