Throughout the years, the faculty in Berkeley before my time may have molded its own continuum mechanics curriculum --- the so-called ``west coast system''. We start tensor algebra and analysis first. For the first course, we mainly teach Cartesian tensor in Euclidean space, but we do introduce concepts such as ``push forward'', ``pull-back''.

Tensor Algebra 5 where A is the change of basis tensor from $\{e_i\}$ to $\{e'_i\}$. Since $e'_3 = a/|a|$ and $a = e_1 + e_2 + e_3$ we find that the representation of e'_3 in the frame $\{e_i\}$ is $[e'_3] = (1/\sqrt{3}, 1/\sqrt{3}, 1/\sqrt{3})^T$. Because there are no other restrictions, we can choose e_2 and e_1 in any manner consistent with $\{e_i\}$ being a (right-handed) frame. For example, we can choose

A First Course in Continuum Mechanics

Course Description (Outline) This course unit gives an introduction to the theory of continuum mechanics from a mathematical viewpoint. In continuum mechanics, matter is represented by average quantities defined in a continuous region of space, rather than as discrete particles. The field is enormous and encompasses the study of fluids, solids, powders, plasmas and almost everything in between.

MATH 45061: Continuum Mechanics

This website presents the principles of finite deformation continuum mechanics with many example applications to metals and incompressible viscoelastic materials (rubber). It can serve as lecture notes for a graduate level course in continuum mechanics for engineers interested in the subject.
