and Hands on ...~~

Docker containers are similar to virtual machines, but don't create an entire virtual operating system.

Instead, Docker enables the app to use the same Linux kernel as the system that it's running

Where To Download Linux

on. This allows the app package to only require parts not already on the host computer, reducing the package size and improving performance.

Continuous availability, using Docker containers with tools like Kubernetes, is another reason for the popularity of containers. This enables multiple ...
