A value chain enables a flow understanding regarding product or service value aggregation of an organization by visualizing the existing processes in a systematic and integrated manner.

### (PDF) Value Chain Mapping Methodology: a proposal for...

A value chain map can convey the following information: 1. The structure of the chain, including all the related organizations and the relationship between them. 2. Your organization's position in the structure. 3. The output (product and service) that are delivered from one link to the next in the chain. 4 useful tips for Mapping Value Chain: 1. Some organizations notice that the real ...

### Four Practical Tips for Mapping Value Chain

Value Chain Maps Posted on June 12, 2018 by andrew campbell Over the years, I have become convinced that a value chain map is a more powerful and more easily accepted starting point, both in consulting and teaching, for operating model work (compared, for example, to a capability map).

This publication constitutes a practical development tool, which implements the sustainable food value chain framework with a focus on small-scale livestock producers, targeting an audience of project design teams and policymakers. Small-scale livestock producers are important actors in food production, human health and management of landscapes and animal genetic resources. However, they face a number of challenges, which hamper their productivity, access to market, and competitiveness vis-à-vis their larger counterparts. By integrating the concepts of value addition and the three dimensions of sustainability, the sustainable food value chain framework not only addresses questions concerning the competitiveness, inclusion and empowerment of small-scale producers, but also incorporates the cross-cutting issues that are increasingly embedded in development projects. These guidelines take the user through the different steps of value chain development, highlighting the particularities of the smallholder livestock sector, such as multi-functionality, specific production cycles or food safety issues, through concrete examples.

Clustering is a process whereby enterprises within a shared value chain cooperatively manage the flow of goods and services from the point of origination to the point of consumption. This volume focuses on the notion of the regional cluster as a tool for value chain management and then discusses specific issues.

The journey from strategy to operating success depends on creating an organization that can deliver the chosen strategy. This book, explaining the Operating Model Canvas, shows you how to do this. It teaches you how to define the main work processes, choose an organization structure, develop a high-level blueprint of the IT systems, decide where to locate and how to lay out floor plans, set up relationships with suppliers and design a management system and scorecard with which to run the new organization. The Operating Model Canvas helps you to create a target operating model aligned to your strategy. The book contains more than 20 examples ranging from large multi-nationals to government departments to small charities and from an operating model for a business to an operating model for a department of five people. The book describes more than 15 tools, including new tools such as the value chain map, the organization model and the high-level IT blueprint. Most importantly, the book contains two fully worked examples showing how the tools can be used to develop a new operating model. This book should be on the desk of every consultant, every strategist, every leader of transformation, every functional business partner, every business or enterprise architect, every Lean expert or business improvement champion, in fact everyone who wants to help their organization be successful. For trainers free additional material of this book is available. This can be found under the "Training Material" tab. Log in with your trainer account to access the material.Additional content can be found on the website for the Operational Model Canvas: <https://www.operatingmodelcanvas.com>

Global value chains (GVCs) are a key feature of the global economy in the 21st century. They show how international investment and trade create cross-border production networks that link countries, firms and workers around the globe. This Handbook describes how GVCs arise and vary across industries and countries, and how they have evolved over time in response to economic and political forces. With chapters written by leading interdisciplinary scholars, the Handbook unpacks the key concepts of GVC governance and upgrading, and explores policy implications for advanced and developing economies alike. p.p1 [margin: 0.0px 0.0px 0.0px 0.0px; font: 10.0px Arial]

This publication aims to help policy-makers, project designers and field practitioners to conceptualize the nexus between gender equality and food loss while offering practical guidance on and tools for integrating gender concerns into the planning and implementation of food loss studies and reduction strategies and interventions. By linking key concepts from gender-sensitive value chain development and the issue of food loss, it emerges that gender inequalities affect the overall efficiency of the food value chain and generate a poor performance that may cause produce to be removed from the chain. The publication provides critical information and entry points for food loss reduction interventions that improve the way women and men participate in and benefit from food production.

Around the world, virtually every company is engaged in some form of effort intended to improve the processing that takes place across an end-to-end supply chain system as they work towards moving their organizations to the next level of performance. Supply chain, particularly when enhanced with collaboration and Internet technology, is uniquely su

These guidelines aim to respond to these questions and support practitioners in translating the Gender-Sensitive Value Chain Framework, developed by the Food and Agriculture Organization (FAO) into action (FAO, 2016a). Building on FAO's comparative advantage on gender in agriculture and food security, these guidelines are primarily intended to assist practitioners in designing and implementing interventions that provide women and men with equal opportunities to benefit from agrifood value chain development. They offer practical tools and examples of successful approaches to foster a more systematic integration of gender equality dimensions in value chain interventions in the agricultural sector and enhance the social impact of these interventions.

Mondiale waardeketens zijn het complexe netwerk van activiteiten tussen lokale producent en eindgebruiker. "Global value chains" schetst de invloed van deze waardeketens op lokaal, nationaal en internationaal niveau. Het boek geeft eerst een theoretisch en wetenschappelijk kader. Vervolgens krijgt de lezer een compleet beeld van de betekenis van mondiale waardeketens aan de hand van diverse casestudies, zoals de bierbrouwin industrie in Ghana, de Namibische bio-industrie, de industrie van halfgeleiders in China en Maleisië en het toerisme in Tanzania.
